

Project: eCommerce website

User Story: Product Search

As a user, I want to search for products using keywords, So that I can quickly find the items I am interested in

Acceptance Criteria:

- The search bar should be prominently placed and visible on any page of the website.
- The search bar should allow the entry of at least 50 characters.
- The search should be initiated when the "Enter" key is pressed or the "Search" button is clicked.
- The search results should display a list of products that match the entered keyword(s).
- If no products match the keyword(s), a message stating "No products found" should be displayed, along with suggestions for related searches or categories.
- Each search result should display the product name, price, a thumbnail image, and a brief description.
- Clicking on a product in the search results should navigate the user to the product detail page.
- The user should have the option to filter search results by categories, price range, ratings, and brands.
- For logged-in users, recent search terms should be saved and available for quick access in a dropdown when the search bar is focused.
